Skills

Data Analysis & Querying:

SQL (Filtering, Joins, Grouping, Aggregation), Data Cleaning, Data Interpretation

Data Tools & Technologies:

SQL Server, SQLite, Python (data analysis fundamentals), WPF Dashboards, Excel

Visualization & Reporting:

Dashboards, Trend Analysis, Insight Generation

Technical Foundations:

Relational Databases, Data Modeling, CRUD Operations

Testing:

Unit Testing (JUnit / XUnit / MSTest), Integration Testing, Test Case Design

Tools:

Git, GitHub, Visual Studio, VS Code

Education

Diploma in Information Technology

Rosebank College

2022 – Present (Completed, graduation pending)

Key Coursework & Focus Areas:

- Object-Oriented Programming and Software Design
- Database Systems and SQL-Based Data Analysis
- Systems Analysis and Application Design
- Data Fundamentals and Structured Data Handling

Adrian Wiltshire

DATA ANALYST INTERN

PROFESSIONAL SUMMARY

- Entry-level Data Analyst intern with hands-on experience analyzing datasets using SQL and Python fundamentals.
- Experienced in data querying, cleaning, aggregation, and dashboard creation to uncover insights and support decision-making.
- Strong analytical mindset with a technical background in databases and software systems.

Projects

Retail Sales Analytics Project

SQL, Python (basic) – GitHub: [RetailSalesAnalytics](#)

- Analyzed retail sales data using SQL queries and aggregation techniques
- Identified trends through filtering, grouping, and data comparison
- Interpreted insights to support business decision-making scenarios
- Interpreted data insights to support decision-making scenario

Donation Analytics Dashboard Project

C#, WPF, SQL, Data Visualization – GitHub: [DonationAnalyticsDashboard](#)

- Built dashboards to visualize donation and resource data using WPF
- Queried relational databases to generate structured reports
- Translated raw data into actionable insights

Disaster Relief App

Software Developer | C#, ASP.NET Core, SQL – GitHub: [DisasterReliefApp](#)

- Developed a database-driven web application using ASP.NET Core and SQL Server
- Implemented user authentication, role-based access, and CRUD operations
- Designed relational data models to ensure data integrity and scalability

EasyKanban Task Management Web App

Java, Swing – GitHub: [EasyKanban](#)

- Developed a Java-based task management system applying OOP concepts
